What is PAINTLES DENT REPAIR (PDR)?

The PAINTLESS DENT REPAIR developed by the production teams on automobile assembly lines. This innovative PDR eliminates bumps and impacts of various diameters / depths.

Our technicians use hand tools, specializing in handling and redress the plate in its original form. In addition, the intervention takes place at the rear of the damaged area so that there is no evidence of previous depression.

What Is it correct in PAINTLESS DENT REPAIR (PDR)?

- Vehicles affected by hail
- Small to large bumps
- The panels without paint cracked
- The bosses who are not close to the edge of a panel

What is it not correct in PAINTLESS DENT REPAIR (PDR)?

It works on virtually all signs of a vehicle, except in the following situations:

- If the damage is located on the edge of the door, the paintless dent repair probably will not work at 100%.
- If the paint is cracked, broken or missing at the base of the bosses or damage, the PDR will not work at 100%.

Beware of vehicles leased:

If you buy your vehicle, the manufacturer may require that all bosses are repaired at the end of the lease to avoid "excessive wear." Call EUROPE DEBOSSSELAGE before the end of your lease to ensure that you do not have to pay the costs of repair of your car rental.
